

Case Study 3 – Structure Inspection Services

Job: Bridge and Structure Inspection
Value: Various jobs, £1,000 - £15,000 per contract
Access: Various – Ladder, Scaffold, Rope Access, MEWP, Confined Space

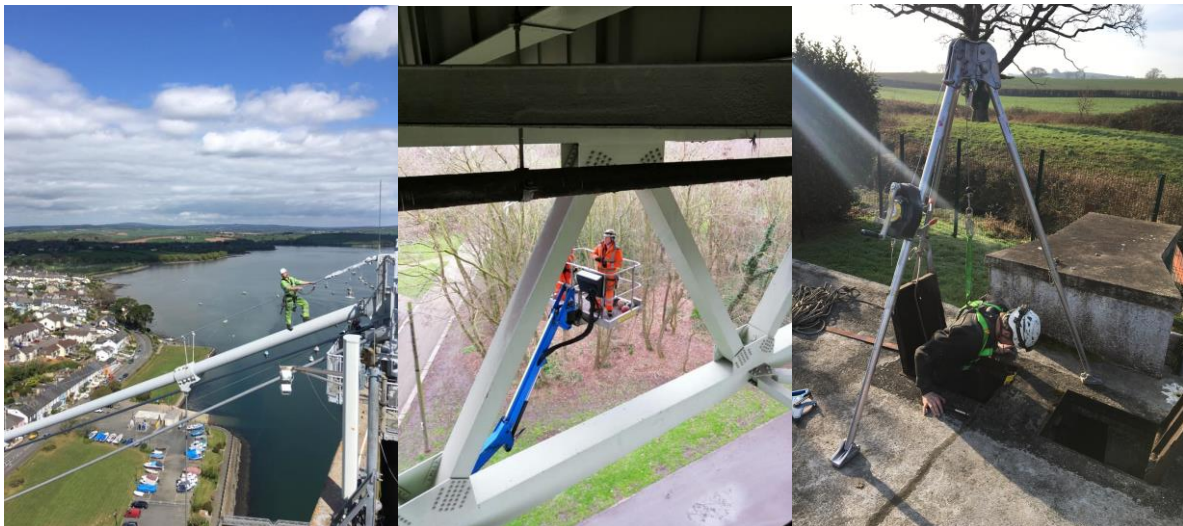

Summary:

Peninsula Access Ltd carry out various structural inspections for many clients, be it local authorities, infrastructure managers, national consultancies, the NHS, the MOD, Churches and Diocese, and private asset owners to name but a few.

Inspection types can vary from client to client and are determined by structure type, specification, access and customer requirements. Types of inspection include; Visual, Tactile, Principal, Special Inspections for assessment, Dimensional surveys, Bolt surveys, Ultrasonic Thickness (NDT), Concrete Testing and Post Works inspections.

Reports can be written from scratch or to existing client formats by our in-house Engineers. Similarly, reports can be text based, image based, drawing based or purely the handing over of recorded inspection data.

Access varies from structure to structure but generally we capitalise on our 'difficult access' ethos and work with Rope Access (IRATA), MEWP's (IPAF), Confined Space (City & Guilds) and mobile towers (PASMA).
